## DETAILED ACTION

### *Drawings*

1. Color photographs and color drawings are acceptable only for examination purposes unless a petition filed under 37 CFR 1.84(a)(2) is granted permitting their use as acceptable drawings. In the event that applicant wishes to use the drawings currently on file as acceptable drawings, a petition must be filed for acceptance of the color photographs or color drawings as acceptable drawings. Any such petition must be accompanied by the appropriate fee set forth in 37 CFR 1.17(h), three sets of color drawings or color photographs, as appropriate, and an amendment to the first paragraph of the brief description of the drawings section of the specification which states:

The patent or application file contains at least one drawing executed in color. Copies of this patent or patent application publication with color drawing(s) will be provided by the U.S. Patent and Trademark Office upon request and payment of the necessary fee.

Color photographs will be accepted if the conditions for accepting color drawings have been satisfied.

### *Claim Rejections - 35 USC § 103*

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claim 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nelson et al. U.S. Patent No. 4,375,047 in view of Chiu U.S. Patent No. 6,396,178.

Nelson disclose a first motor (12) and a second motor (14) where the diameter of the second motor is larger than the first one and the first motor has a rotating stator coupled to the rotor of the second motor. Also disclose that the first motor is energized to rotate the output shaft and then the second motor is energized in order to produce a counter torque to balance the reaction torque. It is inherent that if the torque is going to be affected also the speed is going to be affected and the selection of an AC motor. Nelson disclose the use a motor of different diameter and that there is going to be a electrical connection with both stators but doesn't disclose that the bearing is going to be use as a conductive bearing to transmitting the current from the torque and motor control to the stator in this drive assembly. However, disclose a conductive bearing (13, 132) for the purpose of transmit electricity from the stator winding (15) to a lighting device or sounding device which is connected to the stator winding (15) by a wire (20) to the conductive bearing (13, 132) and said bearing to the stator winding (15) by a wire (104, 124).

It would have been obvious to one having skill in the art at the time the invention was made to modify Nelson's invention and use a conductive bearing for the purpose of transmit electricity.
